# Team: Starliner
Shutdown Instructions

Our CanSat have this logo on its bottom and looks like in the picture below*.

Turning off our CanSat consists of a few simple steps:

1. Locate 2 yellow gaskets.

2. Remove the gaskets.

3. Insert the previously provided screw into the hole.

4. Tighten the screw until you hear the switch click or all LEDs turn off.

CanSat is now completely turned off - it does not collect data and does not transmit a radio signal.

*For the purposes of photos the parachute was removed. The target parachute is red.
